

# Acidifiers

## What are they used for?

VitC is used to break down drugs into a liquid.

## Practice:

VitC is believed to be the safest way to break down crack-cocaine and brown heroin.

## How they are used:

By using a small amount of VitC while cooking, you can break down the drugs to produce liquids that are safer for injection.

## Risks:

Using household products, such as lemon juice, can cause infections. Although VitC is the safest acidifier to use, using too much can be damaging to your veins.
