

Sterile Alcohol Swabs

What are they used for?

Cleaning the injection site before injection.

Practice:

These individually wrapped sterile packages are intended for one-time use only.

How they are used:

Remove alcohol swab from package and wipe the skin just before injecting.

Risks:

- Sharing alcohol swabs can lead to infection.
- Touching the injection site after cleaning with alcohol, can lead to infection.
- Do not clean the skin with alcohol after injection. It interferes with clotting.
